

RESPONSIBLE SOURCING

Gaining a competitive edge in the global marketplace

For almost 100 years, we have helped customers around the world fulfill their sustainability commitments through verification, tracking and tracing across industries from agriculture, energy, manufacturing, forestry, biomass and biofuels to the textile. For us, helping our customers reach their sustainability goals is what we strive for. Sustainability is in our DNA.

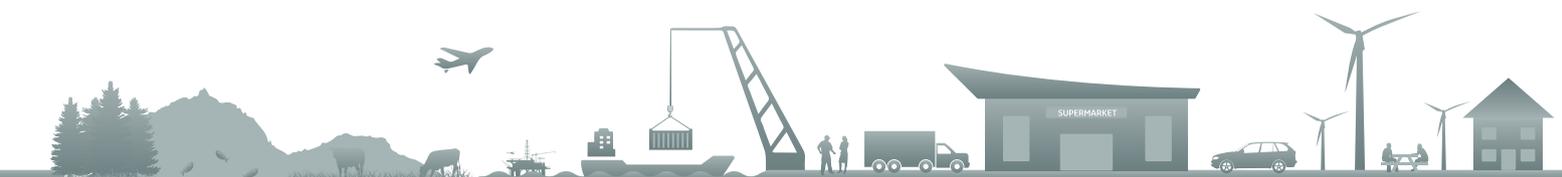

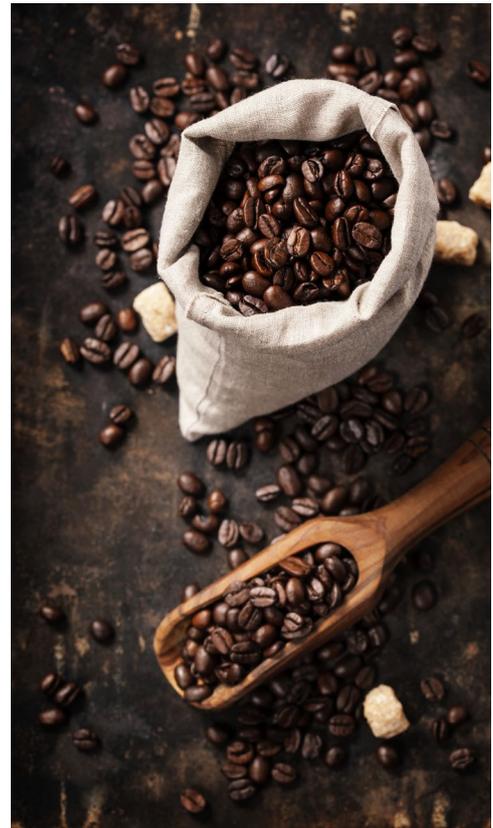

Stakeholders are increasingly becoming aware of an organisation's view and commitments on sustainability. Not only do they want to know where and how their products are made, but which environmental and social criteria the company has sourced the materials from.

Without a solid responsible sourcing roadmap, an organisation loses sight of which sustainability topics are material and where the hotspots are. A responsible sourcing roadmap can help increase transparency within a supply chain, gaining a competitive edge in the marketplace.

At Peterson Projects & Solutions we help you in assessing your organisation's supply chain and develop a course of action accordingly.

We can assist you with:

- Developing responsible sourcing guidelines
- Increasing supply chain transparency
- Market and trend analysis
- Scheme implementation
- Responsible sourcing training
- Verifying ethical sourcing policy

The benefits of responsible sourcing include:

RISK REDUCTION

Understanding your operations can help reduce environmental, social and financial risks

REDUCING ENVIRONMENTAL IMPACT

Following a responsible sourcing plan can help reduce effects of climate change

CUT COSTS

Complying to environmental regulations can help cut costs and save money

MEETING STAKEHOLDER DEMANDS

Responsible sourcing is critical to meeting new market demands

IMPROVING SUPPLY CHAIN EFFICIENCY

Improving supply chain sustainability can help increase logistics and energy efficiency, and worker productivity.

ENGAGING WITH EMPLOYEE

A transparent supply chain can lead to higher employee satisfaction and retention rate.

PROJECTS & SOLUTIONS

Who we are

Projects & Solutions is Peterson's advisory division providing pragmatic and hands-on solutions to your challenges. We support companies in achieving their sustainability goals by assisting them in defining their sustainability policies, reducing their environmental footprint and identifying potential sustainability claims and defining them accordingly.

We do this across various industries from agriculture, energy, manufacturing, forestry, biomass and biofuels to the textile. For us, helping our clients reach their sustainability goals is what we strive for. Sustainability is in our DNA.

We can help your organisation mitigate negative impacts your business operations may have on the economy, society, the environment and last but not least, your contribution to UN's Sustainable Development Goals (SDGs).

Peterson has offices in over 70 countries worldwide. Contact us today to find out how we can help.
